Deforestation is the permanent removal of trees to make room for something besides forest. This can include clearing the land for agriculture or grazing, or using the timber for fuel, construction or manufacturing. If it continues then one day will surely come when will have no trees left with us. Trees are responsible for the survival. They give us Oxygen which is needed for our respiration. Even, trees can only stop soil erosion. Deforestation not only removes vegetation that is important for removing carbon dioxide from the air, but the act of clearing the forests also produces greenhouse gas emissions.
